Traditional Greek dance learning and emotions of addicted mothers – women, during in the closed part of the psychological rehabilitation 18 PLUS.

ABSTRACT

The aim of this research was to study the influence of Greek traditional dance on the emotion of addicted mothers – women, during their stay in the closed part of the psychological rehabilitation of 18 PLUS. The dry Therapeutical Program of closed accommodation 18 PLUS for dependent mothers with their children is a multi-focal suggestion of treatment. Survey participants were mothers or pregnant women aged 19-46 years. The total duration of the study was 9 months. The semi-structured interview was used to evaluate the effectiveness of the intervention. The transcribed data collected from the interviews, were analysed using the content analysis. According to the results, the traditional Greek dance learning seemed to cultivate positive emotions, contributing positively to the participants' emotional health. Specifically, participants reported that significantly improved their mood, felt joy, satisfaction, excitement. They claimed that traditional Greek dance learning was for them a discharge tool and relief of emotional tension and negative emotions. They identified the influence of their positive emotional state in the relation with their child. They pointed out that the whole process was for them a cheerful way to escape from the everyday difficulties. Achieving their goals and improving their dance performance, strengthened as they said, their self-esteem and self-confidence. According to the findings of this survey, it seems that the Greek traditional dance might be a complementary therapeutical method for dependent mothers, by promoting emotional expression, social interaction, behavior change and reinforcing the optimistic attitude to life.

Key words: *Psychotropic substances, dependent mother, detoxication, 18 plus, emotion*
